

# STRONG AUTHENTICATION FOR ONLINE CARD PURCHASES

Strong authentication becomes mandatory  
for all online card purchases from 31 December.

This new security measure means that it will **no longer be possible** to pay for online purchases using **only your card details**.

As with home banking access, users will now have to enter **two or more validation elements** such as: PIN, code sent by SMS or fingerprint.

If you don't already use **strong authentication**, find out more from your bank so that you can start making even more secure online payments.
